

# ANIMUSE in One Minute

# MY ANIMUSE IN SIXTY SECONDS

Our National Action Plan on AMR requests us to **monitor** antimicrobial use in animals, and to **make decisions** based on those data

We have committed to target #1 from Muscat manifesto: **reduce 30-50% AMU from baseline till 2030**

To know our baseline, to know how good we are doing, we need a **standardized tool** allowing data collection, analysis and reporting, easy-to-use, **available 24/7**

WOAH presented to us that tool, it is called **ANIMUSE**. We just need to log-in and play !

WOAH will ensure system **maintenance**, user support, **data quality check** and continuous education

**All for free !** And our data will help building a report of the global situation on AMU in animals, in other words, how all our collective efforts contribute to curb AMR !
