Sharing experience - response for an emergency – transport by sea

- Multi-regional Whole Journey Scenario workshop on long-distance transport by land and sea between Europe, the Middle East, and North Africa
- 7 - 9 November 2023, Tunis, Tunisia
Maritime incident – 24.11.2019

24.11.2019 - port Midia-Constanta;

14,600 lambs – nearby assembly centers;

- livestock vessel Queen Hind, Palau flag;

- heading to Jeddah in Saudi Arabia;

- the ship overturned on its side, in the turning basin;

- efforts were made for turning over the ship;

The maritime authorities assessed the situation and decided the abandonment of the ship; the crew members were rescued.
Information on the vessel

- The ship was built in 1980, and converted in 2017 for the transport of live animals;

- 11 journeys (up to 19000 animals per journey) took place that year (March-November, 2019) on Queen Hind, from port Midia to Iran, Jordan, Saudi Arabia, Kuwait;

Certificate of approval of livestock vessels for journeys exceeding 10 nautical miles - CA in Constanta;

RO-CT-N-058-7920675/06.03.2019
- adult and young cattle – area of 3827m²
- adult and young sheep – area of 5011 m².
### Journeys performed by Queen Hind in 2019 from port Midia Constanta

</tbody>
</table>
Prior to loading:
- the vessel,
- fitness of the animals for continuing the journey and
- the quantities of water and feed.

Loading of animals and their distribution on the 7 decks complied with provisions of Chapter III in Annex I of EC Regulation 1/2005.

Average space allowance of 0.315 sqm/animal (average live weight of 47.46 kg/animal) - 185 pens, 7 decks

584 tons of water and 278 tons of feed onboard.
• Most likely cause: incorrect ballasting of the vessel (according to maritime authorities); change of the “center of gravity” (inappropriate storage of feed).

• Potential contributing factor: the master’s lack of experience (first voyage; abrupt sail of the ship).

➢ After the incident, an operation launched by the Romanian Coastguard, police and firefighters to rescue the sheep
➢ 252 sheep rescued, sheltered and kept under veterinary observation; out of them, 180 sheep were clinically stabilized and subsequently taken over by an NGO for animal protection
➢ The carcasses - ABP approved establishments
➢ Subsequent retrieval and refloating of the vessel from the turning basin by the Romanian state, based on a service agreement
Actions taken following the accident (1)

➢ supplementing the number of veterinarians in the Exit Point;

➢ reviewing the internal procedures for loading/unloading of the livestock;

➢ retraining the personnel in the Exit Point;

➢ implementing contingency plans for each journey;

➢ drafting a specific procedure – Intervention in the Exit Points in case of incidents involving vessels transporting livestock intended for export to third countries:
  - The actions to be taken by the official veterinarians: in the Exit Point, at local level and at central level (NSVFSA);
  - The actions taken by the provisional keepers who were given custody of the animals that were saved.
Amendment and completion of our national legislation, on the basis of the Network Document on Livestock Vessels:

• the technical aspects exceeding the competencies of the official veterinarians to be checked by experts with a high level of expertise: construction and equipment of the vessels while the accompanying documents are checked by the maritime authority – national legislation entered into force in 2020 (3 years before EU regulations);

• reports on the protection of animals transported sent during/at the end of the journey by the vessel’s master sends to the official veterinarians in the Exit Point.
Conclusions

• cooperation with maritime experts is a must: controls for animal welfare do not detect issues such as loss of ship stability, and OV do not have the necessary skills to detect these issues.

• importance of checks done by Port State Control - not only for maritime safety but also for animal welfare.

• cooperation among different authorities carrying out controls on livestock vessels - to prevent such events from happening.

• Starting with 2023, new EU obligations for OV in the EP:
  - to team with authorised maritime experts,
  - to verify prior loading that transporters’ contingency plans in the event of emergencies include a risk analysis of the most likely animal welfare hazards that could occur during journeys.
Thank you for your attention!
